

WATER PRESSURE DRIVEN WET AND DRY SHAVER WITH BEARD TRIMMER, WATER CLEANOUT, AND SPEED CONTROL

Inventor: Zoltan Egeresi, 5500 Coast Rd. Santa Cruz, CA. USA

Application No.: 10/614,270

Filing date: Jul. 7,2003

CLAIM

What I claim as my invention is a "Water Pressure Driven Wet and Dry Shaver with Beard Trimmer, Water clean out and Speed Control. The elected drawing for the patent claim is the angled shaver. This invention consist of:

1. (Previously presented) A small water turbine connecting to the household's water system via a diverter to the sink or to the shower or to any similar water source with sufficient pressure as it becomes the driving source for this invention to oscillate or rotate the shaver head or bird trimmer without using any electricity, therefore it becomes a totally submersible and water proof wet and dry shaver.
2. (Previously presented) A water flow control valve, by changing the water volume passing to the small turbine, it controls the speed of the turbine, therefore the shaving speed.
- 3.(Previously presented) An internal clean out nozzle controlled by a water valve, when depressed water flushes out hair particles from the shaver area trough an opening under the shaving screen.

This utility invention has three claims, (all other claims are cancelled).
